

XM Cyber – Attack Path Management

XM Cyber is licensed in tiers from which you select / multiply the Annual Unit Price as necessary based upon the size of the AD (mandatory base component) plus the number of Servers and Workstations, for On-Premises environments, and the number of Workloads, DB Services and Kubernetes Nodes within the Cloud.

Clearly for full visibility of the entire attack surface, you would license everything within the environment. However, we can also scale the deployment over time, should there be initial priority areas of concern (i.e. lack of visibility in the Cloud) or if resource / budget challenges exist.

Please also note:

- Standard Hours Technical Support is included. A 10% uplift is required for 24 x 7 support.

There are additional optional modules for External Attack Surface Management, Exposed Credential Management, Vulnerability Risk Management and Security Control Management. Further information and pricing is available for these upon request.
