Managed ASM

ASM stands for “Attack Surface Management” and encompasses technologies and services deployed to continuously discover, inventory and contextualise an organisation’s assets. Built on the Armis Centrix Cyber Exposure Management Platform, our Managed ASM service ensures organisations gain full visibility of all assets of all types, from IT and IoT to OT and medical devices, mitigating risk across the attack surface with precision.

Why Attack Surface Management?

The attack surface of organisations continues to grow ever more complex, and new exposures are discovered every day, creating challenges in maintaining asset visibility and prioritising risk. Managed ASM addresses these concerns with:

- **Comprehensive asset coverage** – from traditional IT systems to IoT, OT, and specialised devices.
- **Continuous risk management** – a proactive approach to monitoring, prioritising, and addressing vulnerabilities as they emerge.
- **Simplified remediation** – practical recommendations and hands-on support for efficient exposure management.

Organisations prioritising exposure management reduce breach risk by 3x.

— Gartner

Managed ASM offers: :

- **Asset discovery & intelligence:** Real-time asset mapping and profiling across the environment, creating a reliable inventory of all connected assets. Eliminate blind spots across IT, OT, IoT, and medical assets, ensuring all assets are accounted for and secured.
- **Exposure Detection & Prioritisation:** Detailed vulnerability and exposure analysis, prioritised based on business impact, likelihood of exploit, and remediation value. Prioritise high-impact vulnerabilities, focusing efforts where they’re most needed to maximise security outcomes.
- **Remediation Management and Support:** Direct integration with existing ticketing systems, actionable insights, and hands-on guidance to accelerate remediation. Streamline response with actionable intelligence, freeing up security teams to focus on core strategic tasks.
- **Advanced Threat Detection:** Early warning on emerging exploits and automated alerts and behavioural analysis to identify and neutralise threats early, strengthening your security posture. Detect risks and threats before they impact critical systems, enabling swift responses and minimising downtime.

Why choose Integrity360?

Integrity360’s full range of Managed Services are delivered by experienced, certified security analysts and engineers who constantly manage and monitor your platforms and environments on your behalf.
