

DATA SHEET

Intelligence-as-a-Service (INTaaS)

Expert threat intelligence tailored to your needs

Service Delivery Model Customer Engagement

- Documented plan
- Persistent contact
- Deep understanding of customer mission
 - Priority intelligence requirements (PIR's)
 - Threat Intelligence requirements
 - Security objectives
 - Intelligence gaps
 - Focus areas & areas of interest (AOI)
 - Customer goals

Deliverables

- AI-enhanced reports
- Executive-level briefings
- Technical data (IOC's,
- countermeasures & hunting rules)

Key Benefits

- Enhanced security posture
- Rapid threat detection and response
- Improved incident management and forensics
- Custom intelligence reports and briefing
- Strategic threat hunting and vulnerability management
- Cost-effective threat intelligence integration

On-demand, prioritized threat intelligence expertise

In an increasingly connected world, threats are evolving rapidly, challenging organizations to stay ahead of the curve. With siloed security tools and overwhelming information, companies struggle to synthesize and effectively leverage data for optimum threat mitigation. Trellix Guardians Intelligence-as-a-Service (INTaaS) empowers businesses to combat advanced threats effectively, providing tailor-made intelligence and a dedicated team of experts to answer your threat intelligence questions.

Intelligence-driven defense

Guardians Threat Intelligence consists of data, metadata, and telemetry from Guardians global network of sensors supporting its 40,000 customers, along with third-party sources, open sources, advanced analytical techniques, and expertise drawn from prominent intelligence organizations across the globe. Threat intelligence is a core component of Guardians capability, including our technologies, our Advanced Research Center (ARC), and our global threat intelligence services team. Our team employs a continuous intelligence development cycle consisting of research, global threat monitoring, campaign tracking, operational feedback, and refinement to enable actionable information. Guardian Resident Consultants leverage our threat intelligence tools and data to understand and anticipate threats, improve detection, blocking & mitigation, enhance & accelerate response actions, and advise customers on key cybersecurity decisions.

Transform your cybersecurity landscape with unparalleled threat intelligence

Guardians INTaaS is a strategic partnership in navigating the complex landscape of cybersecurity. Our dedicated team operates on a disciplined intelligence exploitation cycle, working closely with you to develop and prioritize your intelligence objectives and requirements. Our service includes threat actor or group attribution, TTP analysis, risk assessments driven by threat intelligence, and much more. Our flexible model can be scaled to meet your needs, whether it's managing a small set of requests, a larger retainer, and providing an on-site analyst if necessary.

Solutions customized to your needs

Tailored Threat Reporting

Get timely, rich, contextual, and relevant reports and briefings on threats relevant to your organization, enabling proactive defense strategies.

Advanced Threat Research & Analysis

Gain unprecedented insight into a wide range of threats through the industry's most extensive correlation of threat data.

Dedicated Expert Support

Have our threat intelligence experts answer your questions, helping you to prioritize and achieve your intelligence objectives.

Scalable Model

Choose a service level that suits your needs, from a small set of requests to a larger retainer model, even providing an on-site analyst if needed.

Increased Security Efficacy

Enhance the effectiveness of your security tools and teams with broad, out-of-the-box threat visibility and reporting.

Comprehensive Service Offering

Benefit from a wide range of services, including threat actor attribution, TTP analysis, risk assessments, malware analysis, and more.

Want to learn more about Guardians' threat intelligence and speak to an expert or schedule a demo? services, contact us at Guardians@Trellix.com

We understand that every organization has unique threats and vulnerabilities. Our INTaaS offering delivers tailor-made threat campaign intelligence, providing greater visibility into specific threats targeting your organization. This personalized approach helps you make the most of your security tools and teams, offering broad, out-of-the-box threat visibility and reporting.

Unprecedented insight through data correlation

Guardians INTaaS harnesses the industry's most extensive and advanced correlation of threat data, offering insight into a wide range of threats. Whether it's malware, malicious infrastructure, or social network, our team provides comprehensive reporting in a custom form factor, defined by you, aimed at answering your requests.

Tailored reporting and briefings for effective decision making

We believe in the power of informed decision-making. INTaaS includes automated collection and reporting of the efficacy of Guardians solutions in your environment. Furthermore, we correlate detection events with threat campaigns and actors, providing a holistic view of your security landscape. Our tailored Request for Information (RFI) service offers detailed research, report readouts, and additional tools to detect and prevent RFIs. Our executive briefings present these findings to your management team, enabling you to take proactive steps towards improving your security efficacy.

Why Choose a Resident Cyber Threat Intelligence Analyst?

- Tailored to your needs: They work directly with internal teams, ensuring intelligence is relevant and immediately actionable.
- Expertise at your fingertips: Gain access to real-time threat analysis, reducing your organization's risk exposure.
- Strategic investment: Integrating a resident CTIA can reduce incident costs, enhance resilience, and provide long-term ROI.
- Tailored in-depth reports developed by human analysts and AI-enhanced sources.

Don't wait for the next attack to happen. Prevent it.

At Trellix, we give our customers the most comprehensive picture possible. Our cybersecurity experts track threat actors as well as campaigns, techniques, and tools the attackers use so we can better equip you to prevent future attacks and enhance your situational awareness giving you a more actionable view of threat exposures.
