03 Akamai Government Online

01. Akamai Infrastructure Software Services for Edge, Security and Application Delivery

This service provides access to the full Akamai Connected Cloud platform, including all infrastructure software capabilities delivered through Akamai's globally distributed edge and cloud services.

The platform encompasses and integrates the capabilities described in Akamai's specialist infrastructure software bundles, including:

- Application & API Security Services
- Zero Trust & Identity-Aware Access Services
- Edge Compute, Performance & Traffic Management Services
- Network, DNS & Resilience Services

Buyers may procure this platform as a single integrated service or select specific capability bundles depending on their requirements.

Designed for organisations operating complex, distributed digital estates where assured connectivity, service continuity and sovereign control are critical.

02 Service Benefit & Features

Features

- Policy-driven edge security and traffic controls
- Application and API delivery protection capabilities
- Identity-aware enterprise, tactical access, and segmentation enforcement
- Resilient DNS, routing and availability services
- Distributed edge compute and inspection functions
- Buyer-controlled configuration, policy and change management
- Traffic steering and performance optimisation
- Telemetry, analytics and operational visibility
- Support for hybrid, multi-domain and federated architectures
- Integration with buyer identity, logging and monitoring systems

Benefits

- Supports continuity of mission-critical digital services
- Enables sovereign control through buyer-defined policy and governance
- Improves resilience under attack, incident or peak demand
- Reduces dependency on centralised infrastructure choke points
- Strengthens control over access, traffic and segmentation
- Improves availability and performance for critical users
- Supports governance, assurance and operational oversight
- Enhances situational awareness across distributed environments
- Reduces attack surface across complex digital estates
- Enables scalable, resilient and controlled digital service delivery

Layered solutions for smarter approaches to accelerate

Akamai solutions layer together to secure and modernize agency environments based on your priorities

Software-defined Microsegmentation: Visualize and micro-segment entire agency estates

Web App and API Protector: Accelerate and secure entire agency web app and API environments

Secure Internet Access: Dynamically apply least-privilege remote access from any location

Multi-Factor Authentication: Deploy FIDO2, phish-proof MFA

Secure Internet Access: Defend mission-critical environments and services at the edge

EdgeWorker/EdgeKV: Rapidly build and deploy microservices directly on Akamai's secure edge

Edge DNS: Ensure always available, fast, resilient content delivery
