03 Akamai Government Online

01. Akamai Zero Trust & Segmentation Platform

Akamai Zero Trust Access & Segmentation Platform Application provides infrastructure security controls for identity-aware access and segmentation. Buyers define policies to control access to applications, services and workloads using Zero Trust principles, strengthening least-privilege access and reducing lateral movement. Capabilities support secure access for users and third parties, enforcement for managed and unmanaged devices (where configured), and segmentation controls across hybrid environments.

02 Service Benefit & Features

Features

- Policy-driven edge security and traffic controls
- Application and API delivery protection capabilities
- Identity-aware access and segmentation enforcement
- Resilient DNS, routing and availability services
- Distributed edge compute and inspection functions
- Buyer-controlled configuration, policy and change management
- Telemetry, analytics and operational visibility
- Support for hybrid, multi-domain and federated architectures
- Integration with buyer identity, logging and monitoring systems

Benefits

- Supports continuity of mission-critical digital services
- Enables sovereign control through buyer-defined policy and governance
- Strengthens control over access, traffic and segmentation
- Supports governance, assurance and operational oversight
- Enhances situational awareness across distributed environments
- Reduces attack surface across complex digital estates
- Enables scalable, resilient and controlled digital service delivery

Layered solutions for smarter approaches to accelerate

Akamai solutions layer together to secure and modernize agency environments based on your priorities

Software-defined Microsegmentation: Visualize and micro-segment entire agency estates

Web App and API Protector: Accelerate and secure entire agency web app and API environments

Secure Internet Access: Dynamically apply least-privilege remote access from any location

Multi-Factor Authentication: Deploy FIDO2, phish-proof MFA

Secure Internet Access: Defend mission-critical environments and services at the edge

EdgeWorker/EdgeKV: Rapidly build and deploy microservices directly on Akamai's secure edge

Edge DNS: Ensure always available, fast, resilient content delivery
