01 Pricing Overview

02 Pricing Principles

03 Listing pricing

Pricing Overview

Platform pricing approach

Pricing is based on a subscription model for infrastructure software services delivered via a globally distributed edge and cloud platform. Services are offered as pre-defined service bundles, published in advance, to provide transparent and comparable pricing in line with Digital Marketplace requirements.

Bundled tiers

Some services are available in Small (S), Medium (M), and Large (L) pricing tiers. These tiers represent increasing levels of capacity, scale, and assurance, designed to support a range of buyer requirements from standard production services through to high-impact and mission-critical use cases.

Call-off sizing and configuration

Buyers select the applicable service listing and pricing tier at call-off. Final service configuration, capacity selection, and any optional components are confirmed during the call-off process, in accordance with framework rules and the published pricing structure.

Pricing Principles

Subscription-based pricing

All services are priced on a subscription basis, covering access to the infrastructure software capabilities defined in the relevant service listing and pricing tier, for the agreed contract term.

Pricing notes

Prices shown are maximum list prices for the service bundles. Final pricing is agreed at call-off and is based on the selected bundle, service configuration, usage profile, and contract duration. Call-off contracts may run for up to 6 years, in line with G-Cloud 15 Lot 2a rules.

Free or trial version

A time-limited trial may be offered prior to contract award for evaluation purposes. The trial provides restricted functionality, no service levels, and is not for production use. Scope and duration are agreed with the buyer and do not constitute a call-off contract.

Akamai Cloud & Application Protection Platform pricing

Subscription infrastructure security software for web applications and APIs, combining WAAP/WAF, API security, Layer 7 & Network DDoS protection, bot and fraud controls, edge security policy, and AI-aware protections to reduce risk and maintain availability for internet-facing services.

Akamai Cloud & Application Protection Platform

Entry bundle

Pricing = £3665 per month

Intended use

Entry-level production digital services requiring baseline protection for applications and APIs, with integrated DNS support and foundational resilience, suitable for low-to-moderate traffic services entering live operation.

Included outcomes / capabilities (illustrative)

- Secure delivery of applications and APIs at **low** traffic and request volumes
- Full-spectrum protection against sophisticated abuse, fraud, and automation
- High-availability DNS and advanced traffic handling for resilient service delivery
- Always-on mitigation of DDoS attacks to support service availability
- Advanced policy enforcement across distributed application environments
- Comprehensive visibility and assurance tooling to support continuous operations

Akamai Cloud & Application Protection Platform

Small bundle

Pricing = £12,500 per month

Intended use

Standard public-facing or internal digital services operating in production, requiring stronger protection, resilience, and visibility across application delivery and security controls.

Included outcomes / capabilities (illustrative)

- Secure delivery of applications and APIs at **moderate** traffic and request volumes
- Full-spectrum protection against sophisticated abuse, fraud, and automation
- High-availability DNS and advanced traffic handling for resilient service delivery
- Always-on mitigation of DDoS attacks to support service availability
- Advanced policy enforcement across distributed application environments
- Comprehensive visibility and assurance tooling to support continuous operations

Akamai Cloud & Application Protection Platform

Medium bundle

Pricing = £24,995 per month

Intended use

Business-critical or regulated digital services operating at higher scale, requiring advanced protection, stronger resilience, and integrated controls to maintain availability during incidents or peak demand.

Included outcomes / capabilities (illustrative)

- Secure delivery of applications and APIs at **high** traffic and request volumes
- Full-spectrum protection against sophisticated abuse, fraud, and automation
- High-availability DNS and advanced traffic handling for resilient service delivery
- Always-on mitigation of DDoS attacks to support service availability
- Advanced policy enforcement across distributed application environments
- Comprehensive visibility and assurance tooling to support continuous operations

Akamai Cloud & Application Protection Platform

Large bundle

Pricing = £34,500 per month

Intended use

High-impact, or highly sensitive digital services where availability, resilience, and operational continuity are paramount.

Included outcomes / capabilities (illustrative)

- Protection for **very high** volumes of application traffic and API requests
- Full-spectrum protection against sophisticated abuse, fraud, and automation
- High-availability DNS and advanced traffic handling for resilient service delivery
- Always-on mitigation of DDoS attacks to support service availability
- Advanced policy enforcement across distributed application environments
- Comprehensive visibility and assurance tooling to support continuous operations

Akamai Edge Security & Network Resilience Platform

Subscription infrastructure resilience software delivering authoritative DNS, traffic steering, DDoS protection, and edge-based availability controls to maintain performance and continuity for critical services under attack, incident or peak demand.

Akamai Edge Security & Network Resilience Platform

Small bundle

Pricing = £7840 per month

Intended use

Standard production or business-critical digital services that require resilient DNS, traffic steering, and baseline DDOS mitigation to maintain availability during incidents or moderate attack conditions.

Included outcomes / capabilities (illustrative)

- Authoritative DNS and traffic steering for mission-critical services
- High-capacity DDOS protection across multiple locations and attack vectors
- Advanced routing and failover to maintain continuity during major incidents
- Sustained availability during prolonged attack or extreme traffic surges
- Centralised governance, analytics, and operational insight at scale
- Designed for defence, NCI, or national-scale digital infrastructure

Akamai Edge Security & Network Resilience Platform

Medium bundle

Pricing = £12200 per month

Intended use

Business-critical or regulated digital services operating at higher scale, requiring enhanced resilience, multi-location traffic steering, and increased DDOS mitigation capacity during attack or peak demand.

Included outcomes / capabilities (illustrative)

- Authoritative DNS and **mid-scale** traffic steering for critical services
- High-capacity DDOS protection across multiple locations and attack vectors
- Advanced routing and failover to maintain continuity during major incidents
- Sustained availability during prolonged attack or extreme traffic surges
- Centralised governance, analytics, and operational insight at scale
- Designed for defence, NCI, or national-scale digital infrastructure

Akamai Edge Security & Network Resilience Platform

Large bundle

Pricing = £21168 per month

Intended use

National-scale, or highly sensitive digital services where availability, resilience, and sustained DDOS mitigation are essential under severe attack or peak demand conditions.

Included outcomes / capabilities (illustrative)

- Authoritative DNS and **large-scale** traffic steering for mission-critical services
- High-capacity DDOS protection across multiple locations and attack vectors
- Advanced routing and failover to maintain continuity during major incidents
- Sustained availability during prolonged attack or extreme traffic surges
- Centralised governance, analytics, and operational insight at scale
- Designed for defence, NCI, or national-scale digital infrastructure

Akamai Zero Trust Access & Segmentation Platform Application

Subscription Zero Trust infrastructure security software delivering identity-aware access, ZTNA, microsegmentation, and policy enforcement to protect users, workloads and applications across hybrid estates, reducing lateral movement and improving secure remote and internal access.

Akamai Zero Trust Access & Segmentation Platform Application

Small bundle

Pricing = £16270 per month

Intended use

Production digital services requiring secure remote and internal access for a limited number of users and workloads, with reduced reliance on perimeter-based controls and clear separation between applications and environments.

Included outcomes / capabilities (illustrative)

- Identity-aware access controls for a defined group of users
- Secure access to applications without exposing services to the public internet
- Microsegmentation for a limited number of workloads
- Reduced lateral movement risk within internal environments
- Centralised policy definition for access and segmentation controls
- Improved visibility of user access and workload communication
- Supports hybrid and multi-cloud environments

Akamai Zero Trust Access & Segmentation Platform Application

Medium bundle

Pricing = £28275 per month

Intended use

Business-critical or regulated digital services requiring stronger access assurance, broader segmentation coverage, and consistent policy enforcement across hybrid environments.

Included outcomes / capabilities (illustrative)

- Identity-aware access controls for a defined group of users
- Secure access to applications without exposing services to the public internet
- Microsegmentation for a limited number of workloads
- Reduced lateral movement risk within internal environments
- Centralised policy definition for access and segmentation controls
- Improved visibility of user access and workload communication
- Supports hybrid and multi-cloud environments

Akamai Zero Trust Access & Segmentation Platform Application

Large bundle

Pricing = £34500 per month

Intended use: Regulated, or highly sensitive digital services requiring strong identity assurance, large-scale segmentation, and continuous enforcement across complex environments.

Included outcomes / capabilities (illustrative)

- Identity-aware access for large user populations
- Secure access enforcement across extensive application estates
- Large-scale microsegmentation for thousands of workloads
- Strong reduction of lateral movement and insider risk
- Consistent Zero Trust policy enforcement across hybrid and multi-cloud estates
- Centralised governance and audit support for access controls
- High operational visibility for security and platform teams
- Designed for sustained use in high-assurance environments

Akamai Security Analytics, Observability & Testing Platform

Subscription observability and testing infrastructure software for digital services, providing traffic analytics, security telemetry, synthetic monitoring and testing insights to improve performance, resilience and detection of issues across internet-facing applications and edge-delivered controls.

Akamai Security Analytics, Observability & Testing Platform

Small bundle

Pricing = £18210 per month

Intended use

Digital services require baseline observability, synthetic testing, and operational insight to support performance monitoring, resilience assurance, and incident detection across internet-facing applications.

Included outcomes / capabilities (illustrative)

- Synthetic testing to validate the availability and performance of applications and APIs
- Visibility into traffic behaviour and service performance signals
- Security telemetry to support the detection of anomalous activity
- Centralised dashboards for operational monitoring and reporting
- Baseline alerting to support incident awareness and response
- Data retention and query capacity suitable for steady-state services

Akamai Security Analytics, Observability & Testing Platform

Medium bundle

Pricing = £24760 per month

Intended use

Business-critical or regulated digital services operating at a higher scale, requiring deeper analytics, broader synthetic coverage, and stronger operational insight across performance, availability, and security telemetry.

Included outcomes / capabilities (illustrative)

- Expanded synthetic testing coverage for multi-journey and multi-region services
- Enhanced visibility into application performance and availability trends
- Security and traffic analytics to support faster detection and investigation of issues
- Integration with monitoring, analytics, and incident management tooling
- Improved alerting, reporting, and historical analysis capabilities
- Data volumes and retention aligned to sustained operational oversight

Akamai Security Analytics, Observability & Testing Platform

Large bundle

Pricing = £31460 per month

Intended use

High-assurance digital services operating at national scale or under elevated assurance requirements, requiring advanced analytics, extensive synthetic testing, and deep operational insight.

Included outcomes / capabilities (illustrative)

- High-volume synthetic testing to validate performance and resilience under load
- Advanced analytics across traffic, security telemetry, and service behaviour
- Long-term data retention and query capacity to support assurance and governance
- Integration into SOC, monitoring, and operational workflows
- Trend and baseline analysis to support proactive risk and performance management
- Observability capabilities designed for sustained peak demand and incident conditions

Akamai Infrastructure Software Services for Edge, Security and Application Delivery

The service is designed for organisations operating complex, distributed digital estates where assured connectivity, service continuity and sovereign control are critical. Capabilities enable buyers to define and enforce policy-driven controls over traffic, access, segmentation and data handling, supporting operational sovereignty through buyer-controlled configuration, governance and decision-making.

Akamai Infrastructure Software Services for Edge, Security and Application Delivery

Bundle

Pricing = £999630 per month

Intended use

Designed for organisations operating complex, large-scale, or highly distributed digital estates that require integrated edge delivery, security, traffic management, and access control across applications, APIs, users, and workloads.

The service supports environments where assured connectivity, resilience, and policy-driven control are required across internet-facing and internal services, including multi-domain, hybrid, and high-volume digital platforms.

Akamai Infrastructure Software Services for Edge, Security and Application Delivery

Included outcomes / capabilities (illustrative)

- Secure delivery of applications and APIs at very high traffic and request volumes
- Integrated protection against application abuse, automated threats, and large-scale attacks, including DDoS mitigation at the edge
- Centralised policy-driven control across application delivery, security, identity, and traffic layers
- Advanced DNS, traffic steering, and routing to support availability and continuity during incidents or demand surges
- Client-side, account-based, and content protection to reduce fraud, abuse, and automated exploitation
- Identity-aware access controls for large user populations, including workforce and external users
- Segmentation and enforcement controls across thousands of workloads to reduce lateral movement
- Extensive observability, analytics, and testing capabilities to support operational insight and assurance
- Synthetic testing and performance monitoring to validate service behaviour under load
- Designed to support sustained peak demand, complex traffic patterns, and geographically distributed services
