

Mosaic Island

Enterprise Architecture Service Overview

Mosaic Island's **Enterprise Architecture Service** helps organisations design and evolve **enterprise and cloud architectures** that align **business strategy, digital transformation** and **technology delivery**. The service provides clear architectural direction to support informed decision-making, reduce risk and enable successful change.

We support organisations from defining **architecture vision and principles** through to shaping **current, transition and target state architectures**. Our approach ensures architecture is practical, traceable to business needs and capable of supporting **cloud adoption, operating model change** and large-scale transformation.

This service is suited to organisations modernising technology estates, adopting cloud platforms or seeking stronger alignment between strategy and delivery.

Our Approach

Our approach is structured, pragmatic and collaborative. We work *with you, not to you*, engaging business, technology and delivery stakeholders to understand organisational context, priorities and constraints.

Architecture is developed to be **traceable to business capabilities, user needs and outcomes**, avoiding abstract or theoretical models. We apply recognised **enterprise architecture standards**, including **TOGAF®**, where appropriate, tailoring their use to organisational maturity and delivery environment.

The result is architecture that guides delivery while remaining flexible enough to adapt as priorities change.

Strategic Focus Areas

The Enterprise Architecture Service typically focuses on:

- **Enterprise and cloud architecture design**
- **Architecture vision, strategy and principles**
- **Business capability modelling and application mapping**
- **Enterprise roadmaps and transition planning**
- **Current, transition and target state architectures**
- **Target operating model alignment**
- **Reference architectures, principles and patterns**

These focus areas ensure architecture supports both **strategic intent** and **delivery execution**.

Mosaic Island

Service Features

The Enterprise Architecture Service may include:

- Development of **enterprise architecture blueprints**
- Definition of **architecture vision and strategy**
- Creation of **enterprise roadmaps** and **transition plans**
- **Capability modelling** and **application portfolio mapping**
- Definition of **reference architectures, principles** and **patterns**
- Alignment of architecture with **business strategy** and **target operating model**
- Use of appropriate **enterprise architecture tooling**

Scope and deliverables are agreed per engagement.

Service Benefits

This service enables organisations to:

- Gain an **independent, unbiased view** of technology strategy options
- Improve alignment between **business strategy, architecture** and **delivery**
- Reduce risk across cloud and digital transformation initiatives
- Apply recognised **standards and best practice** proportionately
- Access scalable enterprise architecture expertise when required
- Improve consistency and quality of architecture decision-making

Typical Outcomes

- A **clear** enterprise and cloud **architecture** direction
- **Defined** current and target state **architectures**
- **Practical roadmaps** supporting controlled change
- **Improved alignment** between business goals and technology delivery
- **Increased confidence** in cloud and digital transformation initiatives

Why Mosaic Island

Mosaic Island is **independent, technology agnostic** and experienced in delivering enterprise architecture across complex cloud and digital environments. We combine deep EA expertise with a collaborative, delivery-focused approach that turns strategy into actionable architecture.
